MedGenome offers Oncotrack, the liquid biopsy blood test for cancer recurrence detection & monitoring

Our Bureau, Bengaluru

Wednesday, March 08, 2017, 12:45 Hrs [IST]

MedGenome, the premier genomics based research and diagnostics company has announced the launch of Oncotrack which is a liquid biopsy based non-invasive screening test. The test according to the company is set to transform the way physicians in India can identify genetic alterations, interpret, assess and treat various forms of cancer.

"Management of cancer will undergo a massive transformation in India with NGS based liquid biopsies. We are constantly striving to get the most advanced genetic testing technology/technique at affordable prices to the patients and Oncotrack is one such offering", said Sam Santhosh, Chairman, MedGenome.

The test developed entirely by MedGenome, is the only one to be validated in India and verified from samples of cancer patients from across the country. The test screens the samples by analyzing cell-free DNA that is isolated from the patients' blood. Using high end sequencing technology, the screening process identifies specific gene mutations that are linked with Melanoma, Lung and Colon cancers. The test facilitates detection of mutation where there is difficulty of obtaining biopsy or in the event of a damaged biopsy material and non-availability of tissue biopsy. This offers Oncologists the power to look for actionable alterations in a patient's treatment, management, without having to do an invasive biopsy or where biopsy is not an option.

"Liquid biopsy has the capacity to interpret infinite mutations which will pave the way for new drug discovery, research and therapies. Over thirty five oncologists in India have already screened patients using our Oncotrack. Further, since it has a very patient friendly approach, we are confident it will be very well accepted by the doctors and patients," said Dr V.L. Ramprasad, COO, MedGenome.

Oncotrack is a proven molecular tool after histopathology diagnosis and detecting molecular changes at baseline and at the time of relapse in lung and Kumar Prabhash, Medical Oncologist and Dr. Amit Dutt, Principal Investigator (Scientist F) at ACTREC, Tata Memorial Centre.

India is likely to have over 1.73 Million new cases of cancer and over 880,000 deaths due to the disease by 2020. Around 70 per cent of all cancer patients approach the doctor when the disease has advanced, and the chances of cure are very low.
