‘Genetic modifications causes cancer, with a center like this, we can diagnose, prevent and cure deadly diseases,’ he added.

According to a release, this facility will enable researchers to find novel insights into the biology of diseases.

Additionally, it also offers genetic counselling to patients on hereditary cancers, genetic disorders, pregnancy related issues and neurological disorders, it says.

While addressing media Sam Santhosh, Chairman & Founder, MedGenome said, ‘The Center will be a focal point for providing genomics research and advanced diagnostic solutions for treatment and management of various disease,’ he said.
